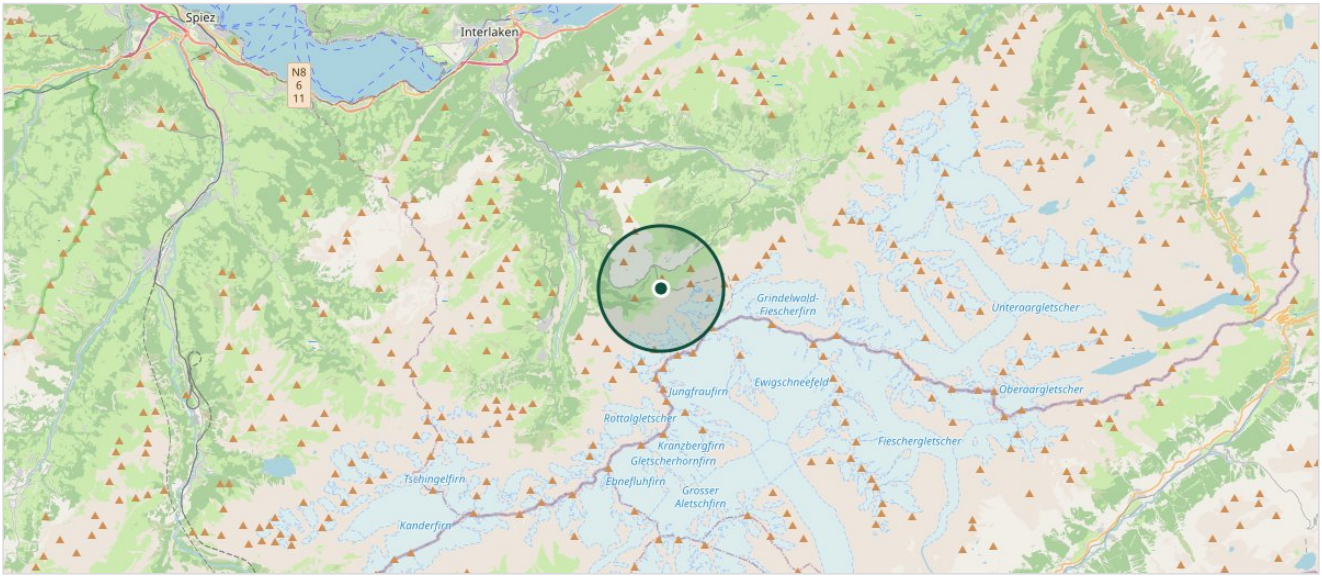
RESULT

Place	Lauterbrunnen Valley, Switzerland
District	Slopes below Eigergletscher
Coordinates	`46.575500, 7.966000`
Radius	± 3.0 km
Confidence	Medium · 73 %
Map	Open in Google Maps
Processing time	22.0 s



Estimated location and search radius. Map © OpenStreetMap contributors.

CLUES IN THE PHOTO

1. **Village on a green terrace above a sheer cliff face, matching Mürren above the Lauterbrunnen valley**
   A settlement perched on a shelf atop vertical cliffs is the distinctive setting of Mürren in the Bernese Oberland, Switzerland.

2. **Waterfall dropping down the cliff below the village into the trough valley, consistent with Mürrenbach falls**
   A tall cascade plunging down the wall of a U-shaped glacial trough fits the Lauterbrunnen valley and its many falls, such as the Mürrenbach.

3. **Snow-dusted pyramidal peak and ridge behind, consistent with the Schilthorn and its neighbours, with the Blumental hanging valley below**
   The skyline profile and the grassy hanging basin beneath it match the Schilthorn group west of Lauterbrunnen, suggesting a view from the opposite (eastern) side of the valley.

4. **Grey limestone outcrop and alpine grass in the foreground, above the treeline, indicating a standpoint around 2100–2300 m**
   Bare limestone and alpine turf above the forest place the camera high on the facing slope, such as the Männlichen–Kleine Scheidegg area.

EXPLANATION BY WYSS TERRA LOCATOR

The terrace village above a vertical cliff with a waterfall below, a straight funicular line above the village and the Schilthorn chain behind fits Mürren seen from across the Lauterbrunnen valley. The camera is well above the village and above the treeline, on a limestone outcrop with alpine grass, which fits the slopes below Eigergletscher station or around Wengernalp/Biglenalp on the east side. The dark wall at left is consistent with the Schwarzmönch flank framing the view from that side. The exact standpoint cannot be fixed from this telephoto view; it could be anywhere along the Eigergletscher–Kleine Scheidegg–Wengernalp slopes, so the radius stays at a few kilometres.

REVIEW BY WYSS TERRA VERIFIER

Verdict	Refined: the review narrowed the estimate down.
Distance between estimates	2.0 km
Note	The scene identification (Mürren on its terrace above the Lauterbrunnen valley, Schilthorn chain behind) holds. I moved the standpoint from a generic east-side point to the Eigergletscher/Biglenalp–Wengernalp slopes, since the view looks southwest across the Trümmelbach gorge with a limestone outcrop at about 2100–2300 m.
